

7 Care & Maintenance Tips for Hot Plates/Stirrers

- 1** Place the vessel on the center of the hot plate before you start.
- 2** When stirring, start at a low speed and gradually increase to the desired speed.
- 3** Never use near flammable or combustible materials.
- 4** Never heat aluminum, metal, or non-borosilicate glass on a hot plate.
- 5** Place a vessel containing liquid on the hot plate before you start.
- 6** Do not use in corrosive environments; fumes and spills may damage the hotplate.
- 7** At high temperatures, closely monitor liquids and consider using an external temperature probe.
