

REMOTE & DISTANCE LEARNING FOR SCIENCE TEACHERS IN 2021

AN OVERVIEW OF SOME 'BEST
PRACTICES' AND ESSENTIAL
UNDERSTANDINGS NEEDED
FOR BEING AN EFFECTIVE
EDUCATOR - REMOTELY

Remote Distance Learning—A whole new perspective in Science & STEM education

Mastering the transition from a traditional face-to-face instructional format to a blended, hybrid, or completely remote situation is difficult for both teachers and students. Our schools continue to serve essential roles in the communities they are built in for multiple reasons. The balance between keeping everyone safe, supporting teachers, and achieving educational goals is a delicate balancing act.

Flinn Scientific is continuing its 44 year history of supporting teachers and administrators with the best and safest resources in order to be successful – regardless of the instructional modality.

Based on the evidence-based research and through recognized best-practices in the STEM and Science program areas, we are offering you this resource to help you plan for the continuity of learning of your students and their forward trajectory through post-secondary and/or workplace placements through the use of distance and remote learning modalities.

Full length Professional Learning opportunities on a wide-range of subjects are available from FLINN on-demand and on request. Contact us today to discuss your unique needs!

Leading Education in 2021: Remote Teaching

ABOUT OUR PRESENTER, JACQUELINE MONTEITH:

Jacqueline began teaching high school in Northern Manitoba, Canada, after graduating from the University of Winnipeg. In 2012, she received her Master's Degree in Distance Education. In 2013, Jacqueline began her current position as a Science Instructional Coach with Frontier School Division. Her role is to teach and support teachers, and thus our youth, using a variety of methods across a massive geographical area. Jacqueline's 18 years of experience throughout the province, her degree in Distance Education, and her zest for thinking differently has created an ideal leader for 2020.

Jacqueline can also help support your organization, your school and your Division in both Science and Distance Education pedagogy. Please contact her directly to discuss your specific professional development needs at truenorthedmb@gmail.com.

Emergency Teaching vs Distance Education

Approaches to Technology

WHAT DO YOU WANT STUDENTS TO DO WITH TECHNOLOGY? v.3

WRONG ANSWERS

- ADD TO FLIPGRIDS
- START BLOGS
- POST TO SEESAW
- LEARN TO CODE
- PRODUCE GREEN SCREEN VIDEOS
- CREATE GOOGLE DOCS, SLIDES AND DRAWINGS
- BUILD DIGITAL PORTFOLIOS
- MASTER PHOTOSHOP

RIGHT ANSWERS

- RAISE AWARENESS
- JOIN CONVERSATIONS
- FIND ANSWERS TO THEIR QUESTIONS.
- DISCOVER NEW QUESTIONS WORTH ANSWERING
- IMAGINE NEW POSSIBILITIES
- DRIVE CHANGE
- TAKE ACTION
- MAKE A DIFFERENCE

TECHNOLOGY IS A TOOL, NOT A LEARNING OUTCOME.

#TRUDATCHAT

BY: @PLUGUSIN, @RERDMANN, @PCAGGIA
@RUSSGORENED AND @MCTOWNSLEY

Using technology can be beneficial when used thoughtfully and with a purpose.

Technology on its own is NOT the answer to the Distance/Remote teaching and learning challenges

Categories in Distance Ed Tech

isnt a real job

Teachers now:

Modes of Interaction

Seeking Patterns

When students seek patterns in the world around them, they see order instead of chaos which builds confidence in their understanding of how the world works and gives them greater control over it.

Barkman, 1998

Student-Content Relationships

Humans are viewed as goal-directed agents who actively seek information.

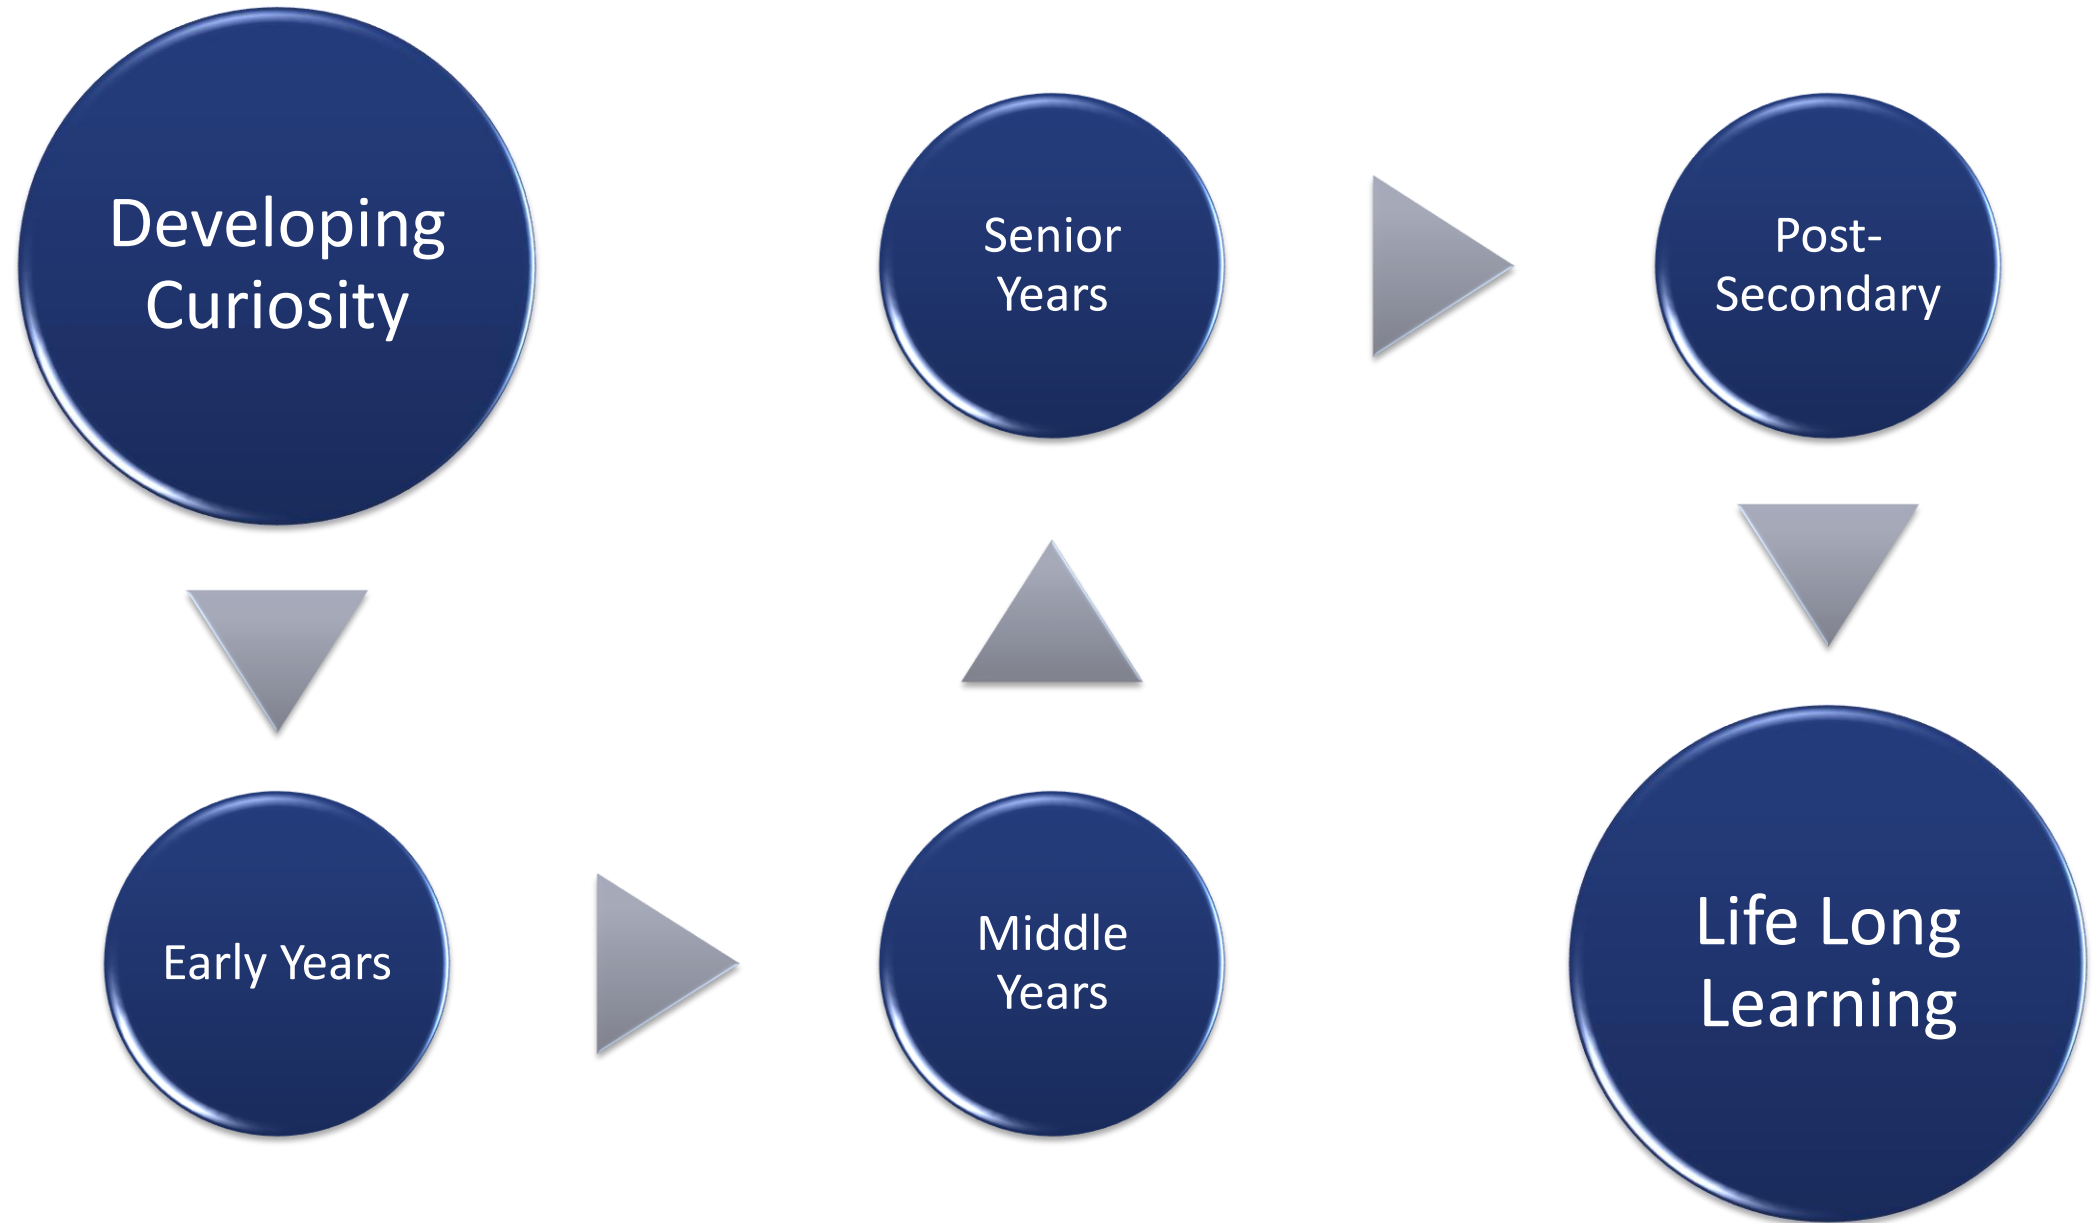

They come to formal education with a range of prior knowledge, skills, beliefs, and concepts that significantly influence what they notice about the environment and how they organize and interpret it.

Cluster	Ideas
Interactions within Ecosystems 	<ul style="list-style-type: none">• Find And Discuss One-Way And Two-Way Relationships• Find Evidence Of Complex Change: Sprouting Seed, Cocoon, Etc.• Find Evidence Of Simpler Change: Decaying Plant Or Animal• Reinforce Needed Vocabulary With Specific Examples In A Natural Setting
Particle Theory of Matter 	<ul style="list-style-type: none">• Observe Allocations Made For Heating/Cooling In The Community: Tar In Sidewalk, Hydro Lines, Docks, Etc.• Collect Water Samples From Around The Community (Lake Areas, Pond, Tap, and Rain). Test Boiling Points, Discuss Results• Each Student Collects Snow in a Container. At Timed Intervals, Record Temperature. Create A Graph, Compare With Entire Class
Forces & Structures 	<ul style="list-style-type: none">• Visit A Structure In Your Community (Bridge, Dock). Identify How It Is Able To Withstand Natural Forces. Observe Any Effects Of Force Onto The Structure• Identify Static, Live, Dead And Dynamic Loads Around The School. Use A Bicycle To Demonstrate Some Concepts• Challenge Students to Design a Structure (Tallest Or Strongest) Using Only Natural Objects They Have Collected
Earth's Crust 	<ul style="list-style-type: none">• Collect Rocks and Minerals in the Community. Describe Using Observations On <u>Lustre</u>, Cleavage, Etc.• Near A Water Source, Find Evidence Of Erosion• Visit A Local Garden. Identify Soil Properties To Make That Garden Successful

CHALLENGE

Build a geodesic dome.

Materials

- 35 twigs or toothpicks that are 6.5 cm long
- 30 twigs or toothpicks that are 5 cm long
- Play-doh, clay, marshmallows, gumdrops, or other similar binding agent

Method

- Follow the steps in the diagram below.

- Brown lines in the diagram represent longer sticks
- Yellow lines in the diagram represent shorter sticks

How it Works

Domes are very strong structures. Domes must be strong enough to withstand pressure from weight, wind, rain, and snow. The triangles in a geodesic dome are very stable. They help distribute any pressure throughout the dome.

Indigi-Tech

First Nations and Inuit have used dome shapes for different types of buildings. The dome was used because it is very strong, and can be built from materials found in nature, like wood or snow. Wood from an ash tree or willow tree can be bent easily to build a wigwam (Ojibway) or mikiwap (Cree) house. Inuit build igloos from snow that is hard-packed and place them in spirals to make the dome shape. Bull boats are an example of an upside-down dome that was used for crossing rivers.

Dark covered Mikiwap/Wigwam

Bio-Links

Spiders make strong and flexible webs with a different network shape: "radial" threads come out from the center, connected with "spiral" threads. This means that even if some threads break, the whole web stays together.

Tools for Teaching

Total of 47 tools!

**30 tools could work well with a
Distance Education program**

Tool: Interactive Lecture

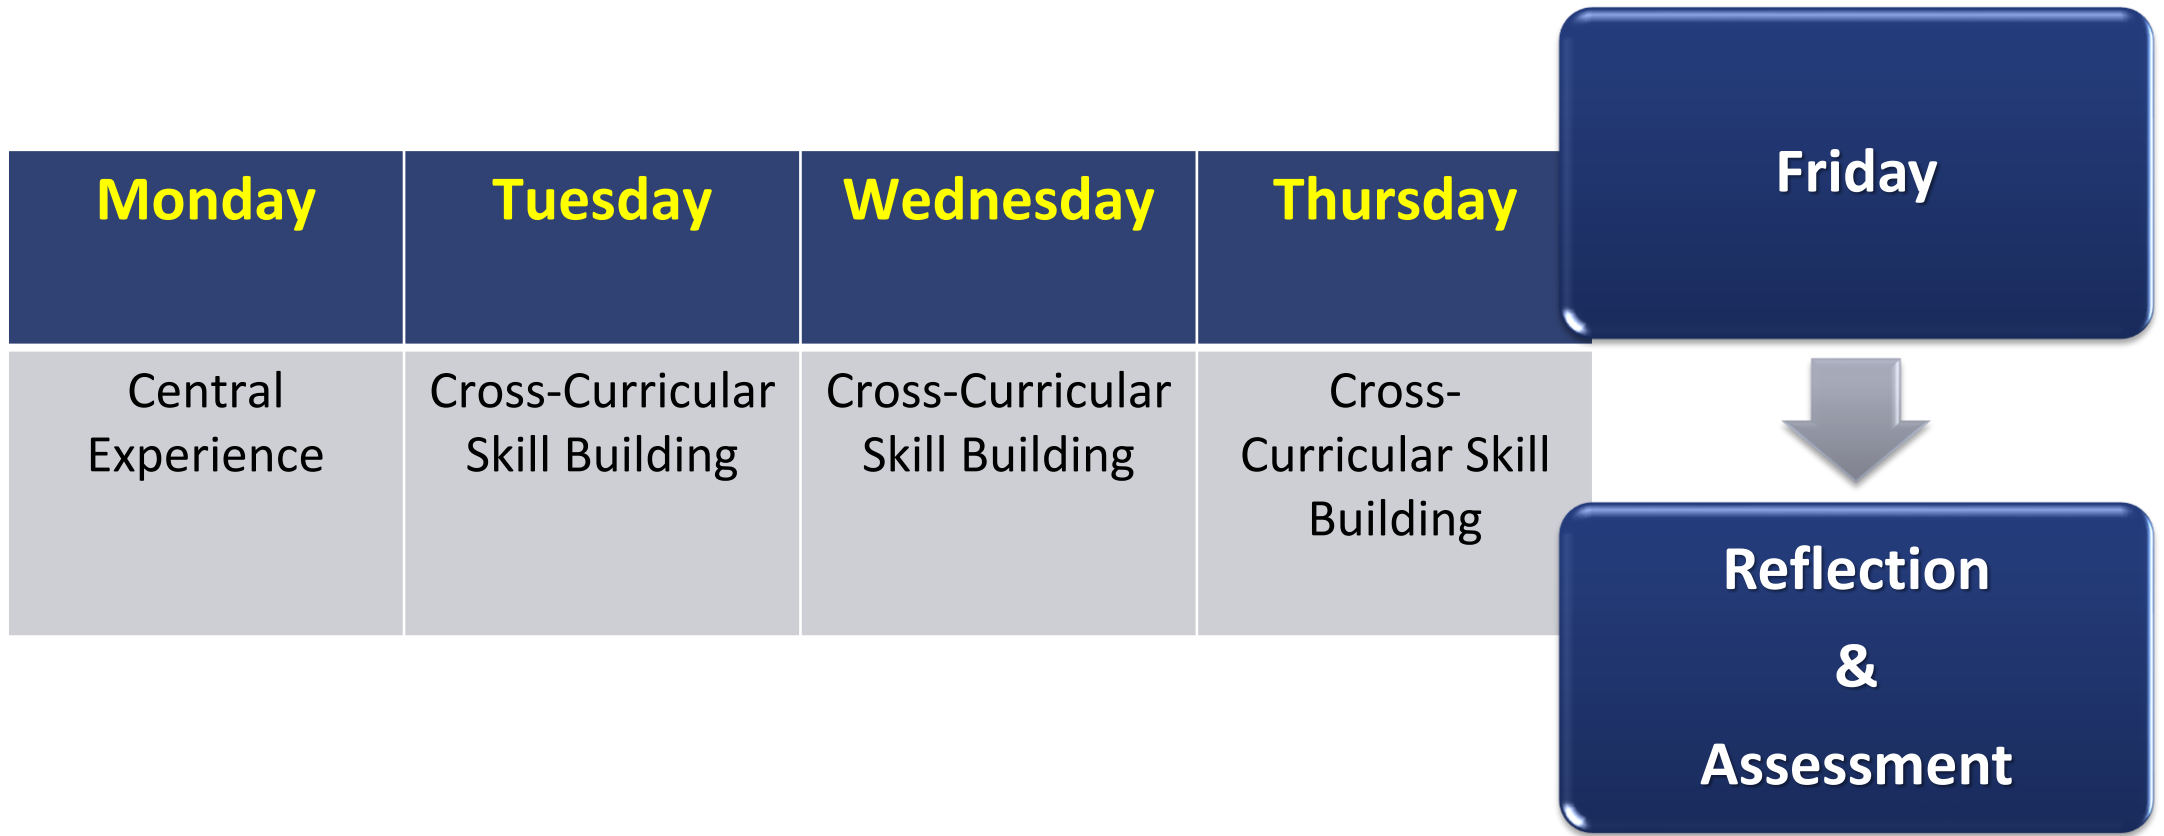

Description	Teacher Actions
<p>Short, 3-5 minute discussions followed by any interactive activity that requires students to do something with the content.</p> <p>Students generate relationships between ideas before continuing.</p>	<p>Map out key ideas that you want to address. Build a logical progression through those ideas.</p> <p>Pause often, and have students respond to questions or prompts to ensure internalization.</p>
Strengths	Alerts
<ul style="list-style-type: none">• Effective way of transmitting information• Students build an understanding based on logical progression of ideas	<ul style="list-style-type: none">• Teachers can fall into traditional lecture without being interactive

Tool: Building & Testing Models

Description	Teacher Actions
<p>Build a conceptual or physical model about an object, process, or concept. Test and evaluate the model with further observations, and modify as needed.</p>	<p>Challenge student ideas using Socratic Questioning. Add to ideas without doing the work of the model. Encourage scientific testing of the model.</p>
Strengths	Alerts
<ul style="list-style-type: none">• Learning becomes enduring when building own models rather than memorizing someone else's model.<ul style="list-style-type: none">• Process of refining thinking.• Process of building and testing models is real science.	<ul style="list-style-type: none">• Some students want clear-cut answers rather than a loose model.• Building and testing means taking risks.• May show lack of interest when model does not test well.

Tool: Interdisciplinary Projects

Description	Teacher Actions
<p>Present students with a loosely defined topic or goal related to a real-world context. The full scope of the project requires students to combine curricular areas over a period of time.</p>	<p>Develop the scope of the task so students can accomplish it within a given time.</p> <p>Provide guidance for all subject areas, or work with additional teacher experts. Consider inviting an expert into your conversations.</p>
Strengths	Alerts
<ul style="list-style-type: none">• Students see relevance of learning with real-life contexts.• Allow students to dig deeply into a subject they are passionate about.• Learning is not subject-specific.	<ul style="list-style-type: none">• Students can invest a lot of time without making progress.• Students need to value all parts of the project and subject areas.

Reflection & Assessment

If 2020 was a bag of chips

Concepts

Skills

Assessment Best Practices

Clear outline of learning intentions

Clear outline of success criteria

Excessive use of formative assessment:

feedback drives learning!

Formative Assessment

To monitor student learning to provide ongoing feedback that can help students identify their strengths, and target areas that need work.

Use of qualitative, in-process feedback, and use results to take action.

Virtual Retellings

Responses to Questions

Practice Tests

Do's and Don'ts of Concept or Skill

Explain What Matters: 2 sentences

Summative Assessment

Seeks to monitor educational outcomes, often for purposes of external accountability.

Use of quantitative measurements for an end-of-activity score.

Proctor shorter exams in live sessions

Expand repertoire of assessment formats: open book, untimed, collaborative

Google-less assessment

Progressive assessment

En.m.Wikipedia.org (2020)

Distance Learning Playbook (2020)

Tool: Building & Testing Models

Description	Teacher Actions
<p>Build a conceptual or physical model about an object, process, or concept. Test and evaluate the model with further observations, and modify as needed.</p>	<p>Challenge student ideas using Socratic Questioning. Add to ideas without doing the work of the model. Encourage scientific testing of the model.</p>
Strengths	Alerts
<ul style="list-style-type: none">• Learning becomes enduring when building own models rather than memorizing someone else's model.<ul style="list-style-type: none">• Process of refining thinking.• Process of building and testing models is real science.	<ul style="list-style-type: none">• Some students want clear-cut answers rather than a loose model.• Building and testing means taking risks.• May show lack of interest when model does not test well.

Assessment

Students demonstrate their thinking as they discuss, test, and evaluate their own models.

Teachers may use highly guided inquiry the first few times so that students see the entire building and testing models process.

Formative Assessment?

Summative Assessment?

Tool: Interactive Lecture

Description	Teacher Actions
<p>Short, 3-5 minute discussions followed by any interactive activity that requires students to do something with the content.</p> <p>Students generate relationships between ideas before continuing.</p>	<p>Map out key ideas that you want to address. Build a logical progression through those ideas.</p> <p>Pause often, and have students respond to questions or prompts to ensure internalization.</p>
Strengths	Alerts
<ul style="list-style-type: none">• Effective way of transmitting information• Students build an understanding based on logical progression of ideas	<ul style="list-style-type: none">• Teachers can fall into traditional lecture without being interactive

Assessment:

**Students demonstrate their thinking
as they respond to prompts or ask questions.**

**For students who need extra support,
provide an outline of key ideas before the lesson begins.**

Formative Assessment?

Summative Assessment?

Tool: Interdisciplinary Projects

Description	Teacher Actions
<p>Present students with a loosely defined topic or goal related to a real-world context. The full scope of the project requires students to combine curricular areas over a period of time.</p>	<p>Develop the scope of the task so students can accomplish it within a given time.</p> <p>Provide guidance for all subject areas, or work with additional teacher experts. Consider inviting an expert into your conversations.</p>
Strengths	Alerts
<ul style="list-style-type: none">• Students see relevance of learning with real-life contexts.• Allow students to dig deeply into a subject they are passionate about.• Learning is not subject-specific.	<ul style="list-style-type: none">• Students can invest a lot of time without making progress.• Students need to value all parts of the project and subject areas.

Assessment:

Students are demonstrating their thinking through the connections they build by completing the project and presenting the final product.

Promote greater engagement by encouraging students to select their own topics and goals. Use a timeline of fixed check-in points.

Formative Assessment?

Daily Teacher Schedule

One hour whole-class

One hour small groups

One hour individual help

2-3 hours office, prep & additional needs

Daily Student Schedule

One hour whole-class

Up to one hour small groups

1-2 hours independent work time

One hour family-based experiential activities

**Teachers need 2-3
times more planning
time than synchronous
teaching time**

WHY??

Purposeful planning which focuses on learning relationships

Using Maslow's to get to Bloom's

Preparing all pre-delivered activity packages

Preparing for whole-group connecting time

Preparing for small-group & individual connecting time

WHY??

Learning new technology features to enhance their practice

Outreach to families

Open office hours

Assessment and evaluation from a distance

Secondary Scheduling Options

Option 1: 1-2 subject blocks of time

Option 2: One subject per day
(all work can be completed that day)

Maximum 1 hour whole-class teaching

Maximum 1 hour small group/individuals

Approximately 1-2 hours independent work time

1 hour family-based experiential activities

Mystery Schedule Considerations

Consider planning from a Distance Ed standpoint
for the remainder of school year

(can transfer to face-to-face much easier)

Consider longer Distance Ed periods of time

For example:

Monthly re-entry points after any school or cohort
shut-down

Hybrid Teaching

School Choice

Re-organize teachers for one-focus classes

F2F/Virtual every second day (school-wide)

Teacher Choice

Create focus time and independent work times within your own class

Teach entire class from a Distance Ed perspective

What does this mean for me?

1. Focus on your peer,
student, & family **RELATIONSHIP**
2. Identify what we can and cannot **CONTROL**
3. Use **EXPERIENTIAL LEARNING** as your base
4. Create learning patterns to **CALM THE CHAOS**

Importance of Celebration

Celebrate our learners, our year, and their academic success.

Celebrate as Educators: our ability to transform, to help our students in a world crisis, and to help ourselves.
