Re: District Proposal for California NGSS Recommended Minimum Core Science Laboratory Inventory

Dear NGSS Implementation Team Leader,

Planning your district's implementation of the newly adopted **California Next Generation Science Standards** is no easy task! Your transition strategy requires the involvement of many, including a partner that *understands* and *supports* your goals through this process.

Flinn Scientific is committed to helping you transition to the **California Next Generation Science Standards** and preparing you for a successful implementation in September, 2018. As your partner, we can help your district enhance teaching and improve student learning by assessing your needs and recommending solutions based on our resources and expertise.

The California Science Teachers Association (CSTA) has developed several Recommended Minimum Core Science Laboratory Inventory lists (<http://cascience.org/ngss/curriculum-framework>) representing the equipment and supplies needed to support and effectively implement standards-based science instruction in accordance with the California NGSS.

To assist districts with the transition, Flinn Scientific has correlated each of the CSTA equipment and inventory lists (to our products and services) and has created easy-to-use purchase guides. All correlated purchase guides are available for download as a printable PDF or as an interactive Excel file.

Go to www.flinnsci.com, then select **California NGSS** at the bottom of our home page.

We are working with several districts in California and have prepared **custom district proposals** for their Recommended Minimum Core Science Laboratory Inventory, Needs Assessment, and Investments. *Each of these district investments were enhanced with Flinn's preferential terms and proposals. A few include:

District	Enrollment	Concentration	Investment
Fresno USD	58,000 Students	K-12	\$175,000*
San Francisco USD	73,000 Students	K-12	\$100,000*
San Juan USD	49,000 Students	6-8 Concentration	\$200,000*

Allow us the opportunity to assist your district so you too can achieve similar results! Please contact me to schedule a convenient time to discuss your district needs and the next steps required for a district proposal.

Respectfully,

Tom Trapp, National Science & Safety Consultant
