Post-Lab Questions

- Consider your journey through the water cycle.
 - Did you move completely through all the stations of the water cycle?
 - If not, which water storage areas were not included?
- Compare your water cycle adventure with a classmate's.
 - Describe several ways the two adventures are different.
 - How are they alike?
- Why is the process of water transport between various water storage areas described as a cycle?
- The water cycle is a *closed system*, meaning no water enters from beyond the system nor leaves the system. Why, then, is it important to keep the water on Earth and in its atmosphere free from pollution?
