## Equal Mass Kit

## Student Data Table

| Sample <br> Cylinder | Color | Length (cm) | Initial Volume <br> of Water (mL) |  <br> Sample Cylinder (mL) | Float <br> or Sink? | Volume of Sample <br> Cylinder $\left(\mathrm{cm}^{3}\right)$ | Density <br> $\left(\mathrm{g} / \mathrm{cm}^{3}\right)$ |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 1 |  |  |  |  |  |  |  |
| 2 |  |  |  |  |  |  |  |
| 3 |  |  |  |  |  |  |  |
| 4 |  |  |  |  |  |  |  |
| 5 |  |  |  |  |  |  |  |

## Post-Lab Questions

1. Was the same amount of water displaced for each sample cylinder? Why?
2. If all of the sample cylinders were of equal volume, would the same amount of water be displaced for each sample?
3. What was the relationship between the volume and density of the sample cylinders? (Remember, they all have the same mass.)
4. Did any of the sample cylinders float in the water? If so, why?
