## Data Tables

Part A. pH of Acetic Acid-Sodium Acetate Buffer

| mL of 0.2 M HCl added | pH |  | mL of 0.2 M <br> NaOH added | pH |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  | Actual | Calc. |  | Actual | Calc. |
| 0 |  |  | 0 |  |  |
| 1.0 |  |  | 1.0 |  |  |
| 2.0 |  |  | 2.0 |  |  |
| 3.0 |  |  | 3.0 |  |  |
| 4.0 |  |  | 4.0 |  |  |
| 5.0 |  |  | 5.0 |  |  |
| 6.0 |  |  | 6.0 |  |  |
| 7.0 |  |  | 7.0 |  |  |
| 8.0 |  |  | 8.0 |  |  |
| 9.0 |  |  | 9.0 |  |  |
| 10.0 |  |  | 10.0 |  |  |

Part B. pH of Ammonia-Ammonium Chloride Buffer

| mL of 0.2 M HCl added | pH |  | mL of 0.2 M NaOH added | pH |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  | Actual | Calc. |  | Actual | Calc. |
| 0 |  |  | 0 |  |  |
| 1.0 |  |  | 1.0 |  |  |
| 2.0 |  |  | 2.0 |  |  |
| 3.0 |  |  | 3.0 |  |  |
| 4.0 |  |  | 4.0 |  |  |
| 5.0 |  |  | 5.0 |  |  |
| 6.0 |  |  | 6.0 |  |  |
| 7.0 |  |  | 7.0 |  |  |
| 8.0 |  |  | 8.0 |  |  |
| 9.0 |  |  | 9.0 |  |  |
| 10.0 |  |  | 10.0 |  |  |

## Part C.

| mL of $0.1 \mathrm{M} \mathrm{CH}_{3} \mathrm{COOH}$ | mL | pH |  |
| :--- | :--- | :--- | :--- |
| mL of $0.1 \mathrm{M} \mathrm{NaCH}_{3} \mathrm{COO}$ | mL | pH | (calc.) |
| (actual) |  |  |  |

## Calculations

1. Using Equation 4 on page 1, calculate the pH of the Part A acetic acid-sodium acetate buffer solution before and after 1.0 mL of 0.2 M HCl solution is added to the buffer. $K_{\mathrm{a}}$ of acetic acid equals $1.8 \times 10^{-5}$. Enter these in the Part A Data Table.
2. Repeat the pH calculation for each successive 1.0 mL increment of 0.2 M HCl added to the buffer. Enter these values in the Part A Data Table.
3. When strong base is added to a buffer of a weak acid-conjugate base, the acid reacts with the base to form water and its conjugate base.
$\mathrm{HA}(\mathrm{aq})+\mathrm{OH}^{-}(\mathrm{aq}) \rightarrow \mathrm{H}_{2} \mathrm{O}(\mathrm{l})+\mathrm{A}^{-}(\mathrm{aq})$
Calculate the pH of the Part A acetic acid-sodium acetate buffer solution after 1.0 mL of the 0.2 M NaOH solution is added to the buffer. Enter this value in the Part A Data Table.
4. Repeat the pH calculation for each successive 1.0 mL increment of 0.2 M NaOH added to the buffer. Enter these values in the Part A Data Table.
5. The ammonia-ammonium chloride buffer solution is a weak base-conjugate acid buffer solution. $K_{\mathrm{b}}$ for $\mathrm{NH}_{3}=1.8 \times 10^{-5}$. Using Equation 4 on page 1 and the relationship, $\mathrm{pH}=14.0-\mathrm{pOH}$, calculate the pH of the ammonia-ammonium chloride buffer solution after 1.0 mL of 0.2 M HCl is added to the buffer solution. The initial moles of both $\mathrm{NH}_{3}$ and $\mathrm{NH}_{4} \mathrm{Cl}$ in 50 mL of the buffer solution are 0.0025 moles. Record the pH value in the Part B Data Table.

$$
\mathrm{NH}_{3}(\mathrm{aq})+\mathrm{H}_{3} \mathrm{O}^{+}(\mathrm{aq}) \rightarrow \mathrm{NH}_{4}^{+}(\mathrm{aq})+\mathrm{H}_{2} \mathrm{O}(\mathrm{l}) .
$$

6. Repeat the pH calculation for each successive 1.0 mL increment of 0.2 M HCl added to the buffer. Enter these values in the Part B Data Table.
7. Repeat the pH calculations for each 1.0 mL increment of 0.2 M NaOH added to the ammonia-ammonium chloride buffer solution. Enter these values in the Part B Data Table.

## Post-Laboratory Review Questions

1. Calculate the pH change when 1 mL 0.2 M HCl is added to 50 mL of deionized water. How does this pH value change compare to those obtained when 1 mL of 0.2 M HCl is added to the buffers?
2. At what point did each of the buffers lose their effectiveness? Explain.
