Energy/Wavelength Calculations

Use Table 1 in the *Background* section to determine the approximate wavelength of light emitted for each metal. Record your wavelength in nanometers and meters in Data Table 2.

- 1. Calculate the change in energy, ΔE , for each metal. Show all work. Record the values in joules in Data Table 2.
- 2. Predict the color of the flame if the following materials were heated in the flame. Explain your predictions.
 - a. Copper(II) nitrate
 - b. Sodium sulfate
 - c. Potassium nitrate

Extension Question

1. Write the electron configurations for the metals used and their corresponding ions.
