

6 Tips to Protect YOUR EYES

1

Always Means Always

Say it and mean it, “Always wear eye protection.” Goggles and safety glasses don’t protect when they’re not worn properly.

2

Make the Right Choice

Know the difference between goggles and safety glasses. Match the eyewear to the hazard for best protection.

3

Beware of Incoming

It’s not just chemicals—glassware can break unexpectedly, and sharps and debris fly.

4

Keep Them Clean

Always have clean goggles and safety glasses available. Dirty eyewear impairs vision and may lead to accidents.

5

Keep Flushing

If a chemical splashes into your eyes, remove contact lenses immediately and flush your eyes for at least 15-20 minutes.

6

Respect the Eyewash

Make sure it is easily accessible; a few seconds can make a big difference.
