Re: Meeting Request – ESSER ARP Funds to Advance Science & STEM Education

Can 15 minutes earn you \$15,000 for your science program? It's Quite Likely! Let's schedule a time and find out!

ESSER ARP is providing unprecedented federal funding for school districts to accelerate science learning. With \$190,000,000,000 nationally directed to schools, at this time 85% of that funding has yet to be received & committed by school districts. Let's work together to see how we can secure some of that funding to advance your science program!

Not sure where to begin? Flinn is on your team, and we are here to help. We are working with district leaders in their planning for the coming 21-22 school year. These ESSER funds may be directed to assist with your science & STEM program, if leaders appeal for funding during the planning process. Flinn's prepared ESSER Funding Alignment documents are templates to assist you with the grant-writing process & planning. Custom district proposals may be prepared as a courtesy by me & Flinn for your district. NSTA / COSSS / NSELA's July webinar is archived for district leaders on the subject. All of these resources (and a copy of this letter with links) may be found on my webpage, ScienceSolutionsMatter.com.

Additionally, alliances with your district's leadership can provide additional resources and funding to recognize your current program, set a trajectory for advances, and create a progress plan. The strongest of science programs recognize the opportunity for continuous improvement. Flinn has solutions with custom district proposals to advance your Science & STEM Program with each of these leaders. Let's consider a proposal for each of these sixteen discreet leaders in your district: Is it doable? Say Yes & let's try!
